VZ series Piston Pump

Features

- **Highly intensified output**
  Adopting the cradle swash plate has achieved high pressure in a compact and light-weight body, resulting in increased output per unit weight.

- **Low noise**
  While increasing the rigidity of the swash plate structure, the noise level has been substantially reduced thanks to the housing geometry resulting from the state-of-the-art measurement and analysis technologies.

- **High efficiency**
  The spherical valve plate and optimum hydraulic balance realize stable and highly efficient operation over a broad range of operation conditions.

- **Long life**
  Adopting the spherical valve plate with its superior abrasion resistance has improved the anti-contaminant characteristics.

Nomenclature

- **Pressure compensator control**
  
  ![Diagram]

- **Combination control**
  
  ![Diagram]

1. **Model No.**
   VZ: VZ series piston pump *1

2. **Pump capacity**
   50: 50.2 cm³/rev
   63: 63.0 cm³/rev
   80: 79.6 cm³/rev
   100: 104.6 cm³/rev

3. **Control method I (Refer to Page A-4 for the applicable models.)**
   A: Pressure compensator control
   C: Combination control *2

4. **Pressure adjustment range**
   1: 1.5 to 7 MPa {15 to 70 kgf/cm²}
   2: 1.5 to 14 MPa {15 to 140 kgf/cm²}
   3: 3.5 to 21 MPa {35 to 210 kgf/cm²}
   4: 3.5 to 28 MPa {35 to 280 kgf/cm²} *3

5. **Low pressure adjustment range**
   1: 1.5 to 7 MPa {15 to 70 kgf/cm²}
   2: 1.5 to 14 MPa {15 to 140 kgf/cm²}
   3: 3.5 to 21 MPa {35 to 210 kgf/cm²}
   4: 3.5 to 28 MPa {35 to 280 kgf/cm²} *3

6. **High pressure adjustment range**
   1: 1.5 to 7 MPa {15 to 70 kgf/cm²}
   2: 1.5 to 14 MPa {15 to 140 kgf/cm²}
   3: 3.5 to 21 MPa {35 to 210 kgf/cm²}
   4: 3.5 to 28 MPa {35 to 280 kgf/cm²} *3

7. **Direction of rotation, when viewed from the shaft end**
   R: Clockwise (rightward)

8. **Control method II**
   H: Pressure feedback method
   J: Solenoid operated method

9. **Voltage code for the solenoid valve**
   <Applied only when control method II is J>
   A: AC 100 V (50/60 Hz), AC 110 V (60 Hz)
   B: AC 200 V (50/60 Hz), AC 220 V (60 Hz)
   P: DC 12 V

10. **Piping direction**
    X: Side port

11. **Design No. (The design No. is subject to change)**

12. **Control method III**
    No designation: Without remote control system
    RC: With remote control system *4

Note: *1 Only petroleum-based hydraulic fluids are acceptable for the VZ series.
*2 The combination control is not applicable to VZ130.
*3 The 4th pattern of the pressure adjustment range (3.5 to 28 MPa {35 to 280 kgf/cm²}) applies only to VZ50, VZ63, VZ80, and VZ100.
*4 The pressure adjustment range with a remote control system is the 4th pattern only (but the 3rd pattern for VZ130).

Note: JR-G (T) 02 and JRP-G02 are recommended for the remote control system's relief valve.

If the vent port is blocked, the pressure compensation structure does not work and the pump operates at a fixed pressure.

Foot supports and piping flanges are not provided with the pump. Order them separately as required by referring to Pages S-2 to S-4.

Foot supports and piping flanges are not provided with the pump. Order them separately as required by referring to Pages S-2 to S-4.
Pressure adjustment methods

Pressure compensator control

- PC differential pressure adjusting screw
- Hexagonal flat lock nut: 16
- Socket for hex key: 5
- Socket for hex key: 8
- Pressure adjusting screw
- Pressure adjusting range code
- Discharge pressure variation/one revolution of the pressure adjusting screw
- VZ50, VZ63, VZ80, VZ100
- VZ130

Combination control

- Pressure adjusting screw
- Hexagonal flat lock nut: 32
- Hexagonal flat lock nut: 32
- Hexagonal lock nut: 32
- Socket for hex key: 8
- Low pressure adjusting screw (PL)
- High pressure adjusting screw (PH)

Pressure adjustment range [Common to the pressure feedback method (CH) and solenoid operated method (CJ)]

- The 1st to 4th patterns correspond to the pressure adjustment range designation codes 1 to 4.
Relationship between the protruding length of the discharge rate adjusting screw and the discharge rate (pressure compensator control)

The maximum discharge rate can be set to the desired value by turning the discharge rate adjusting screw at the side of the housing.

- Turning the adjusting screw clockwise decreases the discharge rate.
- Turning the adjusting screw counterclockwise increases the discharge rate.

### Relationship between the protruding length of the discharge rate adjusting screw and the discharge rate (combination control)

- The discharge rate adjusting screws are provided with scales as shown below.
  - Turning the adjusting screw clockwise decreases the discharge rate.
  - Turning the adjusting screw counterclockwise increases the discharge rate.

<table>
<thead>
<tr>
<th>Pump model</th>
<th>Low quantity adjusting screw</th>
<th>High quantity adjusting screw</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>VZ63C</td>
<td>0 to 10</td>
<td>0 to 17</td>
</tr>
<tr>
<td>VZ80C</td>
<td>0 to 10</td>
<td>0 to 17</td>
</tr>
<tr>
<td>VZ100C</td>
<td>0 to 10</td>
<td>0 to 17</td>
</tr>
</tbody>
</table>

(Scale graduation: 1°)

Note: The high quantity adjustment range may be restricted due to the setting for the low quantity range. See the graphs on Page A-49 for details.

- Adjust the discharge rate according to the relevant discharge rate adjustment graph by following the procedure below.
  - For the low quantity range, read the value for the desired discharge rate on the graph and turn the low quantity adjusting screw to set the scale position to the read value.
  - For the high quantity range, read the value for the desired discharge rate on the line corresponding to the value for the low quantity range on the graph and turn the high quantity adjusting screw to set the scale position to the read value.
  - When adjusting only the high quantity range, loosen the lock nut and adjust as described above.
  - When adjusting only the low quantity range, loosen the lock nut on the high quantity adjustment screw and adjust the setting for the low quantity range as described above while holding the high quantity adjusting screw in place with a hex key.

#### Example of adjustment

When adjusting the discharge rate of VZ80C to 23 cm³/rev for the low quantity range (QL) and 75 cm³/rev for the high quantity range (QH)

1. From the discharge rate adjustment graph for VZ80C in combination control, first read the value for QL = 23 cm³/rev, which is 5°, and adjust the low quantity adjusting screw accordingly.
2. Then, read the value for QH = 75 cm³/rev on the line for 5° of QL, which is 11°, and adjust the high quantity adjusting screw accordingly.

- The setting values indicated above may change slightly depending on the conditions of use (fluid temperature, hydraulic fluid type, etc.). For final fine adjustment, repeat the adjustment described above and achieve the setting appropriate for the actual application.
**Factory setting of discharge rate**

The discharge rate for the high quantity range is factory adjusted to the maximum discharge rate and the discharge rate for the low quantity range is generally factory adjusted as follows.

<table>
<thead>
<tr>
<th>Pump model</th>
<th>Low quantity (QL) setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>VZ50C</td>
<td>Scale position: 9°</td>
</tr>
<tr>
<td>VZ63C</td>
<td>Scale position: 8°</td>
</tr>
<tr>
<td>VZ80C</td>
<td>Scale position: 8°</td>
</tr>
<tr>
<td>VZ100C</td>
<td>Scale position: 8°</td>
</tr>
</tbody>
</table>

**Discharge rate adjustment graph in combination control**

Linear adjustment of the discharge rate for the low quantity range is not possible below the adjustment range (section indicated by the dashed line).

High pressure adjusting screw (P₂)
Socket for hex key: 8
Hexagonal flat lock nut: 32

Oil filler port for the pump case

Drain port

Discharge rate adjusting screw
(low quantity)

Discharge rate adjusting screw
(high quantity)

Suction port
Size 2 split flange boss
(SAE J518)

Discharge port
Size 1¼ split flange boss
(SAE J518)

M12 × 1.75
Effective thread depth 27
